PROFESSIONAL SUMMARY

Full Stack Engineer with 2.5+ years building production SaaS and government-scale web platforms — React/Next.js/TypeScript on the frontend and NestJS/PostgreSQL on the backend. Currently developing frontend for the Government of Andhra Pradesh's MSME and Rural Water Supply platforms. Strong in RESTful API design, RBAC, multi-tenant architecture, and PostgreSQL performance optimization.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript, Tailwind CSS, HTML5, CSS3
Backend: NestJS, RESTful APIs
Databases: PostgreSQL, Supabase, SQL
Architecture: Multi-Tenant Architecture, RBAC, API Design, Performance Optimization
Tools: Git, Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Developer, TECHVED Consulting India Pvt. Ltd. **Bengaluru | Jan 2025 – Jul 2026**
Common Harmony CRM (Art of Living) · React.js, TypeScript, Tailwind CSS, NestJS, PostgreSQL, Supabase

- Led end-to-end development of a multi-tenant CRM and back-office platform serving 5 admin roles (teachers, organizers, finance, national, and EU super admins)
- Designed and shipped a Role-Based Access Control Management (ACM) module enabling dynamic, per-tenant permission customization
- Architected the EU multi-tenant system, unifying multiple European countries under a single centralized administration model
- Built Fee Settings modules letting tenants configure and control program fee structures region by region
- Developed secure RESTful APIs in NestJS and optimized PostgreSQL queries for high-volume workflows; delivered production releases in Agile/Scrum

Full Stack Developer, Sumeru Software Solutions Pvt. Ltd. **Bengaluru | Jan 2024 – Dec 2024**
Participant Management & Registration System (Non-EU Regions) · React.js, Tailwind CSS, NestJS, PostgreSQL

- Built participant registration and management workflows across non-EU regions
- Implemented complex financial logic — transfers, refunds, additional sales, discounts, and offline payments — with backend triggers enforcing reliable state transitions
- Developed admin dashboards and listing pages handling large-scale participant datasets
- Ensured end-to-end data consistency between frontend workflows and backend services
- AOL Landing Pages (React.js / Tailwind CSS): responsive course-announcement pages optimized for performance and cross-device consistency

PROJECTS

Code Battle — Real-Time Multiplayer Coding Platform,
Next.js 16 · TypeScript · Tailwind CSS v4 · Supabase Realtime · Monaco · Pyodide · codebattle.tejaverse.org

- Built a real-time 1v1 coding battle platform where developers compete on the same problems under the same clock across devices
- Implemented a match state machine (waiting → matched → countdown → active → finished) powered by Supabase Realtime subscriptions
- Designed a server-authoritative scoring system: a SECURITY DEFINER Postgres function atomically computes ELO (K=32) and XP into an immutable ratings ledger — clients can't forge outcomes
- Added multi-language execution (JavaScript, TypeScript, Python via Pyodide) in a sandbox with no DOM/network access and per-test timeouts
- Enforced Row-Level Security across all tables with race-safe submissions (unique partial index) and httpOnly cookie sessions

CodeTrace — Interactive DSA Visualizer, **Next.js 16 · React 19 · TypeScript · Tailwind CSS v4 · Supabase · codetrace.tejaverse.org**

- Built a production-grade algorithm visualizer covering 119 problems across 13 categories, each with two approaches (brute-force + optimal)
- Engineered line-level tracing — every algorithm is decomposed into granular trace steps so the active source line is highlighted while the data structure (arrays, pointers, hash maps, grids) animates in sync
- Built a per-approach visualizer registry with live variable readouts and plain-English step explanations
- Implemented Google OAuth (CSRF state-protected) and email/password auth with session cookies, backed by Supabase with Row-Level Security
- Persisted per-user completion and last-opened progress through a typed REST data layer

Interview Handbook — Full-Stack Interview Prep Platform,
Next.js 14 · TypeScript · Tailwind CSS · Supabase · Monaco · Gemini AI · PGLite · interviewhandbook.tejaverse.org

- Built a full-stack prep platform covering 500+ topics across 9 categories (HTML, CSS, JavaScript, DSA, Python, PostgreSQL, React, System Design, Technical Q&A)
- Engineered 60+ interactive algorithm/UI visualizations plus a Monaco live code editor and an in-browser PostgreSQL sandbox (PGLite)
- Integrated a Gemini-powered AI assistant for on-demand explanations and interview coaching
- Implemented bcrypt + JWT (httpOnly cookie) auth with Supabase RLS and progress tracking — streaks, activity heatmap, completion analytics
- Cut page-navigation latency via server-side caching (5-min TTL), a client-side search index, and route prefetching; added global natural-language search
